Use 60W Edison Bulbs

Available in four fixtures – table lamp, wall lamp, floor lamp and ceiling lamp – the San Pedro De Atacama looks geometrically impossible. The light is three-dimensional; the fixtures are two-dimensional. Iris meshes the concepts of observation and understanding. When one looks at the design from the side, one sees a three-dimensional object (bulb) floating in a two-dimensional object. This seems almost impossible – just like the continued growth of the cacti in San Pedro De Atacama desert. Iris's design is clean and elegant. Change the bulb to a colored one and the effect is engrossing. Its slimness also creates a bit of movement – a mere touch of the stand will instigate these "light cacti" to slightly reposition. There is nothing quite like the San Pedro De Atacama – both the desert, and the lighting fixtures.
